

# Kaleab Hegie

Web developer

I'm a third year computer science student at ACT looking forward to be a full stack developer. I consider my self as a junior web developer but I still have yet to learn.

## PERSONAL PROJECTS

### Et Travel

- Et travel is a website project , its gives basic tour and travel functions. I did this project when I was in 2'nd year in my collage.
- It was developed using HTML/CSS and bootstrap for the frontend part and the backend was developed using php.

### Movie Clon Using API

- This is a Movie clone site using API called IMDB and using java script the functionality's are searching , getting description watching trailers.
- This Project is done by HTML/CSS and java script.

### Library management System

- We did a library management system using c++ language when we first took programming with c++ course. Even though it works only with consol it was a good experience doing it.

### Vehicle Management System

- This is a website that was done for my Django final project it allows a company to use its vehicles effectively by assigning them to employees only when they are needed. It was developed using HTML/CSS and JS for the frontend and Django for backend.
